

Tabletop Piston Fillers

FILLERS

APACKS FPT Series (thin liquid) and FPV Series (thick liquid) Tabletop Piston Fillers are ideally suited for any production environment handling a wide range of products and containers. These accurate, repeatable and reliable volumetric Piston Fillers are highly versatile and easy-to-operate. Set the fill volume, manually place the container, and activate the Foot (or hand) Pedal. Product is dispensed by pneumatically operated cylinders and stops once the desired fill volume is reached. Both the FPT and FPV Series offer 316 stainless steel food grade contact parts which are quickly disassembled for cleaning.

The FPT Series draws thin, low viscosity products such as oils or juices directly from a drum or tank, eliminating the need for a hopper. The FPV Series fills thin to thick, high viscosity products such as salsas or creams from the hopper (included). Liquids are drawn into the product cylinders which then dispense a controlled volume.

Either Series Tabletop Piston Filler is available with one or two Heads. Add such options as the Hot Fill Upgrade or Hopper Upgrades for even more versatility.
